

Lakeside Seeds Catalog 2020 - 2021

Dear Loyal Customer,

Thank you so much for your past purchase(s)! Seed processing is now complete and our 2020 – 2021 catalog of available seeds is here! 2020 has been a very strange year for us all – we hope that life finds you and yours well and safe! Due to several factors, the seeds we were able to collect this year was a bit different. In addition to COVID, and somewhat of a drought in our area, we also have a new baby at home. This led to the inability to collect certain species, as it took too much time, or, because they went dormant before setting seed. In addition to this, certain species have not been in very high demand the last several years (or no demand at all), and as such, we are discontinuing a few species from our list. We will mark them in a special section as “Special Order Only” - from now on, those species can be collected, but only by special request. We have, however, still been able to add several species this season and have many returning favorites. We hope you find them interesting!

PLEASE NOTE: You can still purchase some of our items on the Ebay store, but MANY are not listed there. **Only about 1/3 of our items are listed on Ebay!** In addition, because of Ebay's excessive fees, the number of seeds offered there are less, versus directly ordering from us in the catalog. So, the best value, and perhaps easiest for both of us, is to simply email us your order directly and we can send you a direct PayPal invoice.

Note that all seeds are “first come, first served,” so orders are filled on a basis of when they are received – so get your orders in soon to prevent items being sold out! **To see images of each flower, please visit the “Catalog Pictures” link below!** All seed packets are \$2. Shipping is a standard \$3.50 - \$4, depending on location (the cheapest a padded envelope can be sent), for up to 35 packets. If you want more than 35 packets, it may increase shipping slightly. Please note that if the USPS changes their shipping prices for a standard bubble envelope, then shipping cost will likely increase to match that.

Please let us know if you have any questions! Here are all the links you will need:

Catalog Pictures: <http://lakesideendeavors.com/growwild/cat/20/cat2021.htm>

Ebay Store: <https://www.ebay.com/str/lakesideseeds>

Our Facebook Page: <https://www.facebook.com/lakesideseeds/>

Our Email: aumusranch@gmail.com

Finally, if you have been pleased with the seeds you received from us, **please let your family, friends and gardening buddies know about us!**

Thank you!

Jeff and Kim,

Lakeside Seeds

Guide to the Catalog

Latin Name – shows the Latin name of the plant

Common Name – shows one of the common names of the plant

- shows the approximate number of seeds per packet

Avail – shows availability:

☉ indicates normal availability;

L indicates limited number of seed is available;

VL indicates a very limited number of seed is available;

2018 indicates no new crop this year, but last year's is still available, if desired;

Dur – shows duration of plant:

P – perennial, the plant lives 3+ years (usually much more)

A – annual, the plant lives only one year, or one growing season

B – biennial, the plant comes up, persists through a winter, and then dies after blooming

Other Symbols:

☀ - grows in full sun

☁ - grows in part sun

☀ - grows in full shade

🍷 - is said to be edible, in part or in full

💧 - prefers moist soil

☠ - parts or all of the plant are poisonous

-  - plants is a hummingbird favorite
-  - plant attracts butterflies
-  - plant attracts bees
-  - plant has medicinal or herbal applications

GROWING INSTRUCTIONS

The best time to plant wildflower seeds is either in the fall, winter, or early spring. Wildflowers are different from garden annuals and vegetables - wildflowers are very tough, so they can handle the cold, in fact, some even require a “cold period” to break seed dormancy.

If you wish, you can plant the seeds in spring. And you can even plant them in the fall... around September/October, and they will either come up then, and overwinter as a tiny plant, or they will come up in March/April. If you plant in the spring, it should be early, if you wait too long in the spring, it will be too hot, and then you'll need to water the seeds/seedlings frequently so they don't die while they are getting established. But, if you plant them as soon as the soil is not frozen, they should be able to get growing and become established before scorching summer heat. If you live in an area (like the South) where it gets hot very quickly in the spring, then fall/winter may be your best time to plant. Some wildflowers even NEED a cold period, to break their dormancy so they germinate! Most wild flower nurseries recommend fall planting as the best time to plant seeds.

Depending on how you have things set up for your garden, you can either mix all the seeds yourself and spread them, or you can do what we normally advise people to do, which is to plant them as individual species, rather than scattering them all together. The individual method gives you better control over the area, and also allows you to monitor what comes up. I would advise that you scatter each individual species in an area that is 3 inches by 3 inches, or if you have more area available, then use a 10 inch by 10 inch area for each species. Take about... say 15 - 20 seeds of 1 species, and spread it in an area... and just press them down into the soil slightly.... and then, move a few inches over, and do the same with the 2nd species... and then, the same with the 3rd... and so on. Mark where each one is... at least with a stick, if nothing else, and probably mark what each one is, too. (I usually make maps of my gardens on paper, but you could also just number them or something.) I also advise not to use the whole packet at one time - these seeds are fresh, from just this past season, so germination rate should be high. So, I would use the seeds sparingly, and save the excess seed (in the fridge will keep them freshest) and then, if you don't have luck the first time you try planting, you can try again, or try them in a new area!

159. *Symphyotrichum turbinellum*

160. *Symphyotrichum urophyllum*

161. *Triadnum fraseri*

162. *Trientalis borealis*

163. *Trillium grandiflorum*

164. *Vaccinium pallidum*

165. *Verbena hastata*

166. *Verbena stricta*

167. *Verbena urticifolia*

168. *Verbesina alternifolia*

169. *Veronicastrum virginicum*

170. *Viola fimbriatula*

171. *Viola lanceolata*

172. *Viola macloskeyi*

173. *Viola sororia*

174. *Xyris torta*

Special Order Only

The following species are seeds we have carried in the past, but are being discontinued from our normal catalog, due to lack of interest. They will be available only by special order. If you are interested in packets of these species, please contact us and let us know. **These will be available for \$3.50 per packet, instead of the normal \$2**, and will have to be collected once seeds become available throughout the season.

Euphorbia corollata
Gnaphalium obtusifolium
Geum vernum
Heuchera americana
Hieracium venosum
Krigia biflora
Ludwigia alternifolia
Penthorum sedoides
Polygonella articulata
Polygonum virginianum
Potentilla norvegica
Ranunculus abortivus
Ranunculus sceleratus
Rorippa palustris
Sanicula odorata
Silene antirrhina
Silphium terebinthinaceum
Talinum calycinum
Triosteum perfoliatum
Vaccinium oxycoccos
Veronica peregrina

Thank you for being a great customer!

If you have any questions, please let us know! (ausmusranch@gmail.com)

If you see something you like, but it is sold out, be sure to let us know. We can let you know as soon as it is back in stock.

If there is something you would like to see us carry, let us know and we will try to grow it to get seeds to offer in the future, if it is something we can grow here in zone 6b.

PLEASE SHARE OUR CATALOG WITH OTHERS!!! :)

Thanks again!
